Homework 3

Design Document

fifo.cpp

- main()
 - Take input from csv file
 - Read each line from csv and put into an array
 - Initialize page frames with empty values of -1
 - Start a page frame pointer
 - Start something that indicates if the page is available or not

available	Not available
Don't print it to the page frames and indicate it as a hit	Input it in the frame or replace it with the oldest page, indicate fault

- Finish by printing the total fault
